About

This handheld dew point meter is ideal for on-site inspections, analysis and diagnosis. The device displays real time pressure dew point, atmospheric dew point, temperature, pressure and humidity in numerical and graph format. It also gives an indication of the dew point purity class according to ISO 8573.1:2010

The dew point meter's prediction algorithm quickly and accurately predicts the final stable pressure dew point value and estimates the time to the sensor to reach that value.

The replaceable desiccant that comes with the measuring chamber protects and dries the sensor when the instrument is not in use, thus ensuring a quick response time for each new test.

Applications

- Manufacturing and industrial use
- Clean, dry compressed air and inert gases
- Temporary measurement
- Service technicians and auditors
- Gas pressure up to17 bar (246 psi)
